## Tips for correct seed storage

In order to maintain your seeds "fit" with a high germination rate, adequate storage conditions are a must/ you require adequate storage conditions. Therefore all our seeds (inhouse) are stored in a climate-controlled/air-conditioned environment with constant humidity levels and a constant temperature of 15°C.

Similar conditions may easily be generated/ created at home. For this purpose, any seeds should be packed dry and airtight to start with. Storage containers with tight-fitting lids are the most suitable option, alternatively the entire rack may be wrapped with cling film. Then store everything in a cold place away from light and look forward to next spring!

The shelf life/durability of seeds varies by nature. For your convenience we have summarised a few guidelines for the most common vegetables

1-2 years: onions, parsnip

2-3 years: lamb's lettuce, lettuce, leek, parsley, chives, carrot, fennel

3-4 years: celery, bean, pea, endive, pepper, chilli, tomato

4-5 years: beetroot, spinach, cabbage, kohlrabi, radish, aubergine, cucumber, Malabar spinach, chard, soy bean

## Germination capacity check online

**Sufficient for ca. 150 plants**

**Asarina scandens**

**GB:** Charming annual climber with dainty, deep violet flowers and ivy-like leaves. Sow in pots, covering the seed with just a thin layer of soil, and keep moist at 18-20 °C until germinated. Plant outdoors when all risk of frost has passed. Needs support for climbing.

**DK:** Etårig vidunderlig smuk slyngplante med mørkviolette, sirlige blomster og efeu-lignende løv. Dyrkes i potter, dæk kun frøene med en lille smule jord og hold dem fugtige ved 18-20 °C, til de spirer. Beplantningen må først sættes udendørs, når der ikke kan forventes mere frost. Har brug for støtte til ranken.

**NL:** Prachtige, eenjarige klimplant met donkerpaarse, sierlijke bloemen en klimopachtig blad. Teelt in potten, zaden met slechts een beetje aarde bedekken en bij 18-20 °C tot de kieming vochtig houden. Pas planten in de koude grond als er geen risico meer is op vorst. Heeft klimhulp nodig.
